

COMPANY PROFILE

THE FUTURE DELIVERED, JUST THE WAY YOU IMAGINE
BUILT ON PRECISION. DEFINED BY CURATION.

About Us

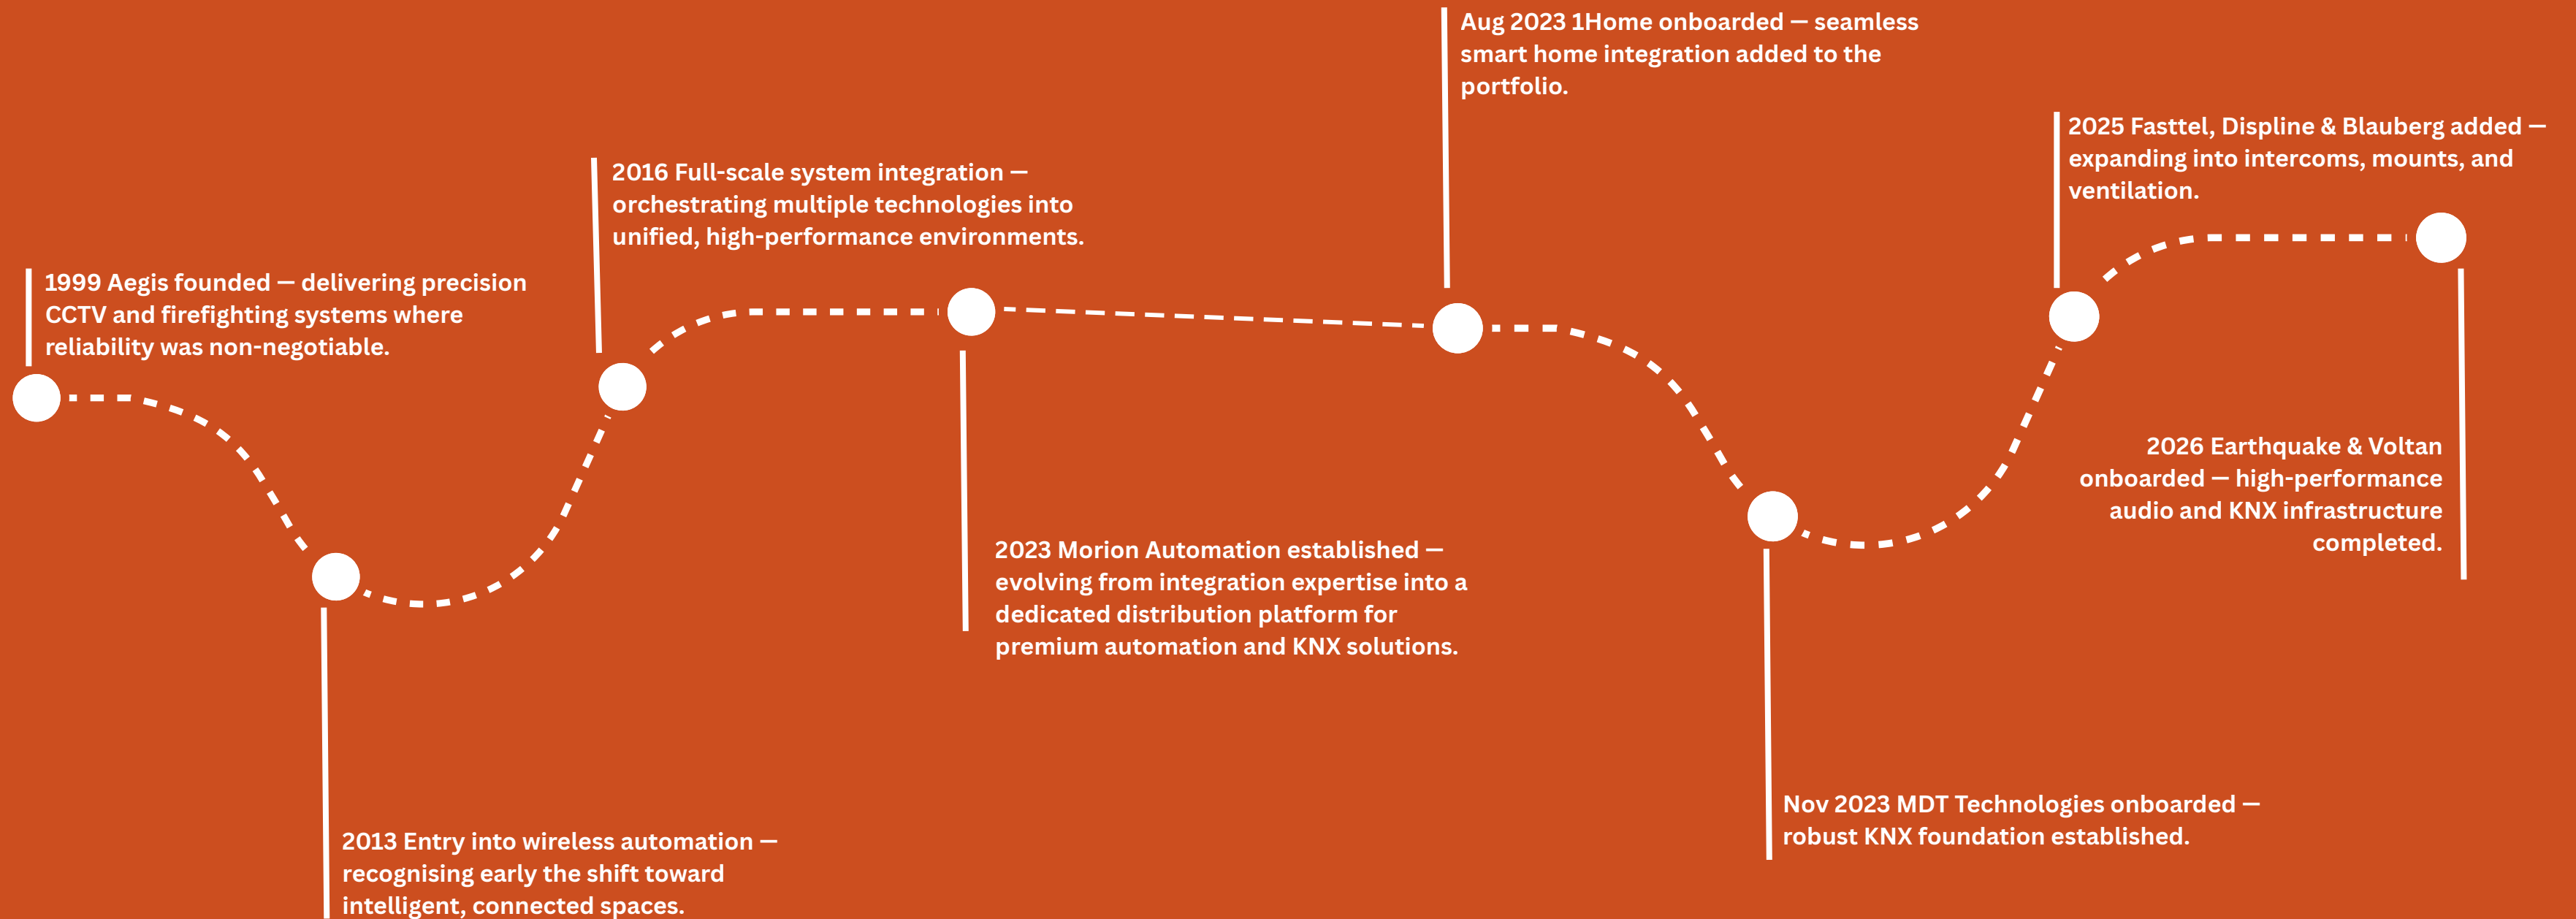

Morion Automation is a premium distribution and solutions partner headquartered in Hyderabad, India — specialising in building automation, smart home technologies, and intelligent control systems.

Founded on a legacy of precision engineering dating back to 1999, we represent a deliberately curated portfolio of globally respected manufacturers — selected for their engineering rigour, design integrity, and long-term reliability.

We work alongside system integrators, architects, consultants, and developers from early-stage specification through to commissioning — bringing world-class automation solutions into India's most demanding environments.

THE MORION HISTORY

Vision

To become India's most trusted distribution partner for intelligent automation — offering a premium portfolio, deep technical expertise, and enduring value for every space we help shape.

Mission

To deliver world-class automation technologies through carefully selected companies and solutions — scouting the best possible innovations to create a seamless, reliable, and elevated experience for every client.

What We Do

At Morion Automation, we specialise in bringing world-class intelligent automation technologies to India's most demanding environments. Our curated portfolio spans every layer of a smart building — from KNX BMS and backbone infrastructure to KNX-based residential automation, guest room management systems, and the interfaces you touch every day.

KNX Building Automation

Smart Home Integration

Designer Control Interfaces

Multiroom Audio Systems

IP Intercom & Access

Ventilation & Air Quality

The Morion Advantage

At Morion Automation, our advantage is not just the products we represent — it is the vendor support we bring to your doorstep, working closely with dealers to ensure every project moves from selection to success with confidence.

Vendor Support at Your Doorstep

We work closely with dealers, architects, consultants, and system integrators to bring globally proven automation brands closer to every project — with responsive support, product clarity, and reliable execution guidance.

Sustainable Practices and Environmental Stewardship

End-to-End Project Support From system design to on-ground commissioning, our team works alongside you — simplifying complexity and ensuring flawless outcomes at every stage.

Brands & Partners Invested in Your Growth

The brands and partners we choose are aligned with your operational needs and long-term growth. From product selection to project excellence, they bring the reliability, expertise, and commitment needed to support successful outcomes.

Strategic Partnerships and Collaborations

We believe in the power of collaboration to drive innovation and achieve mutual goals.

Thought Leadership and Expertise

European Engineering Excellence
Our portfolio is anchored by Germany's MDT Technologies for KNX, Belgium's TENSE for designer interfaces, and Slovenia's 1Home for smart integration — the gold standard in building automation.

Global Presence and Market Adaptability

Complete System Coverage From backbone KNX infrastructure and multiroom audio to IP intercoms, ventilation, and precision wall mounts — our brands cover every layer of an intelligent space.

Solutions

Morion represents a select group of globally respected manufacturers — each chosen for engineering excellence, design integrity, and alignment with the demands of premium environments. Every brand in our portfolio is a deliberate choice, not a catalogue addition.

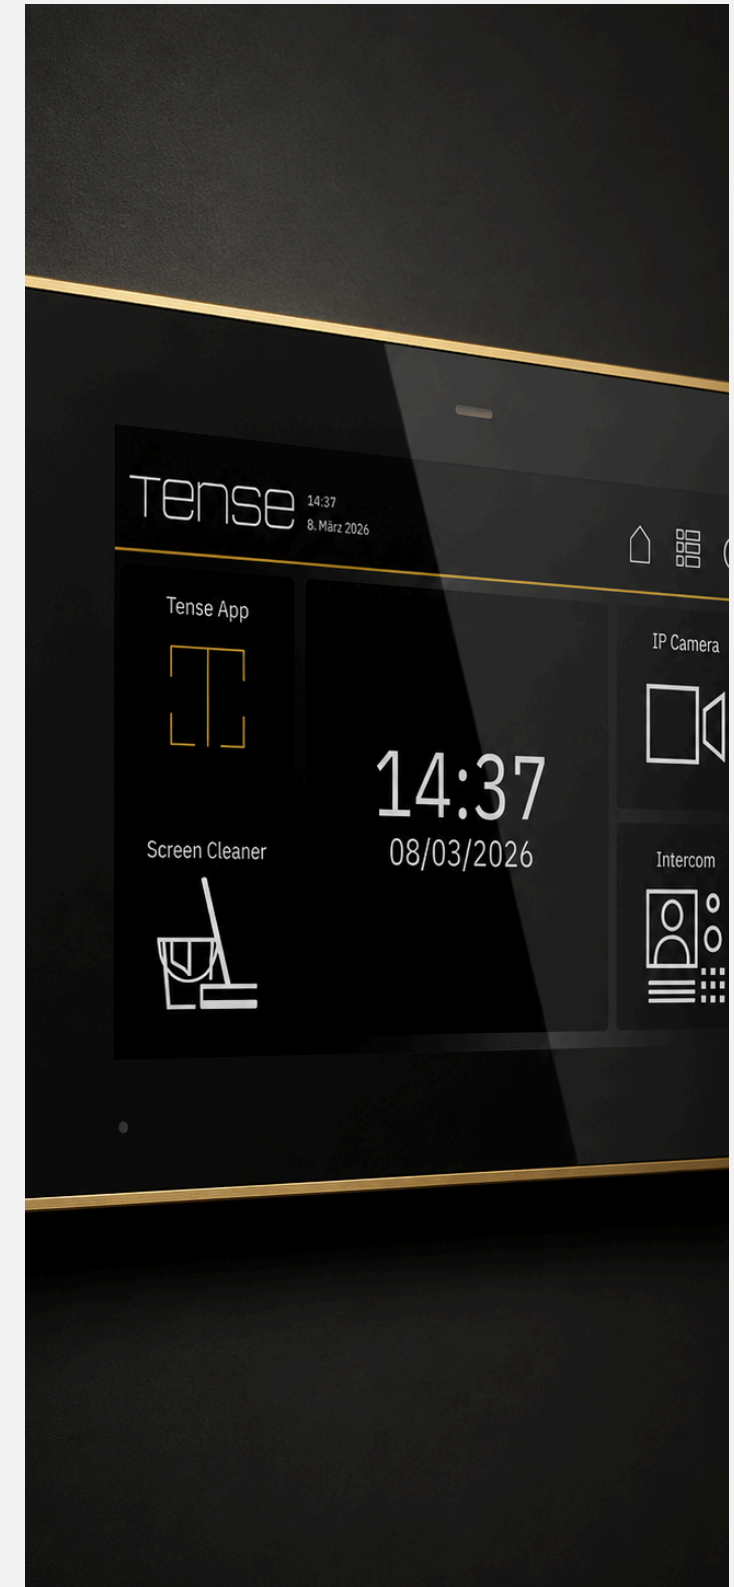

MDT Technologies

Germany's leading KNX automation manufacturer, MDT forms the backbone of every intelligent building system we deploy. Their actuators, sensors, dimming modules, and control components are engineered to the highest standards of reliability and performance — trusted by integrators across the world for over 30 years.

TENSE

Belgium's most refined designer keypad brand, TENSE creates architecturally minimal control interfaces that disappear into the wall — until you need them. Each piece is crafted with precision materials including stone, metal, and glass, making them as much a design statement as a control surface.

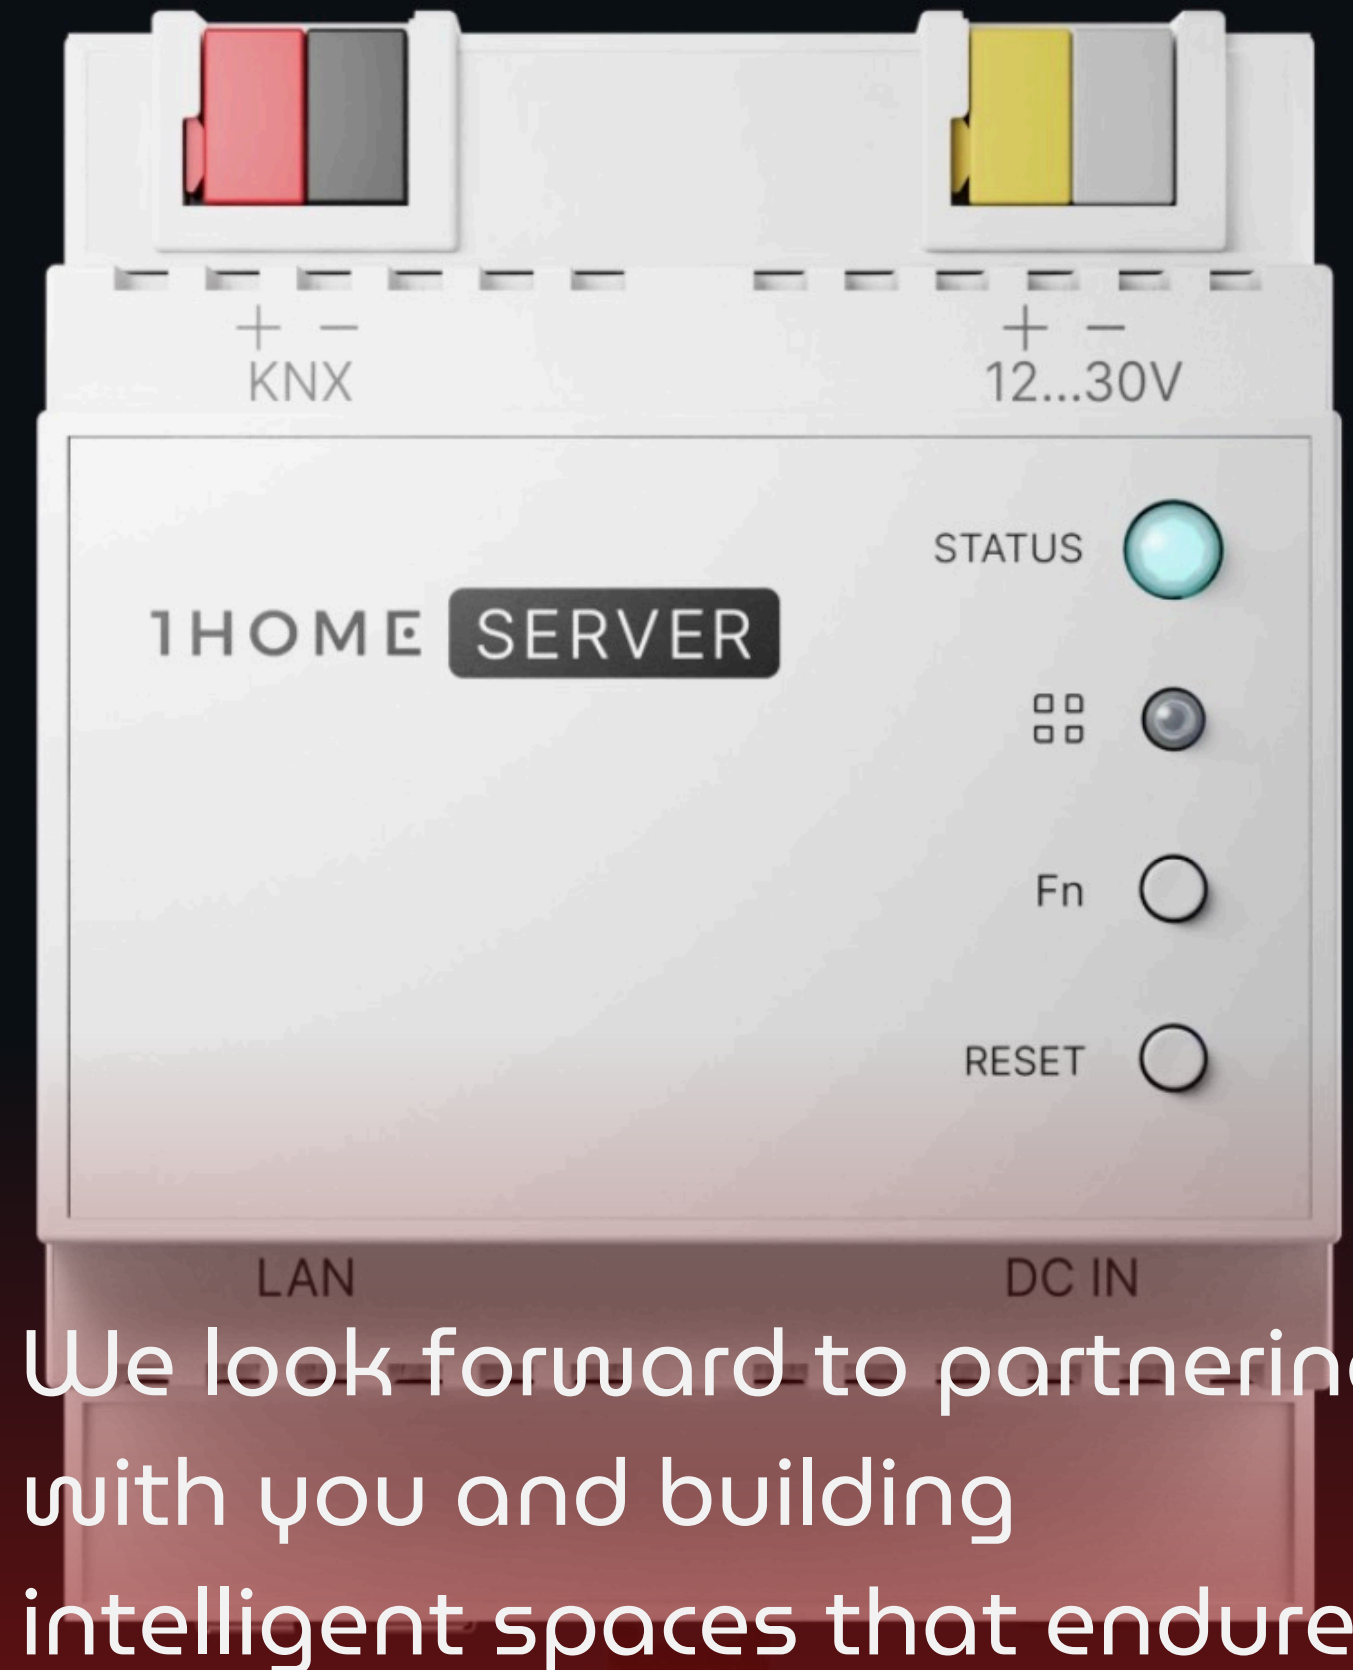

1Home

1Home is Slovenia's premier smart home integration platform — purpose-built to connect KNX systems with the way people actually live. Through a single, elegant app, 1Home brings together lighting, climate, security, audio, and shading into one seamless experience — controllable via smartphone, tablet, or voice.

What sets 1Home apart is its deep KNX compatibility. No complex reprogramming, no compromise — just a clean bridge between professional-grade building automation and the modern connected home. Compatible with Amazon Alexa, Google Home, and Apple HomeKit out of the box.

For system integrators and end users alike, 1Home transforms a technically complex KNX installation into something intuitive, beautiful, and future-ready.

We look forward to partnering with you and building intelligent spaces that endure.

TRIVUM

Trivum is Germany's specialist in high-performance multiroom audio and smart control solutions — engineered for spaces where sound quality and system reliability are non-negotiable. Whether it's a single luxury villa or a large-scale hospitality project, Trivum delivers seamless, zone-based audio that integrates natively with KNX.

What makes Trivum exceptional is its ability to combine audiophile-grade sound with deep building automation integration. Every zone is independently controllable — from wall panels, touch displays, smartphones, or voice — without compromising the acoustic experience.

For premium residential, hospitality, and commercial projects, Trivum is the audio backbone that elevates every space it enters.

FASTTEL

Fasttel is Belgium's premier IP intercom and door communication specialist — trusted in luxury residential, hospitality, and commercial projects where first impressions and access security must be flawless. Their systems combine robust engineering with refined aesthetics, delivering crystal-clear audio and video communication at every entry point.

Fasttel intercoms integrate natively with KNX, enabling door events to trigger lighting scenes, unlock sequences, and security responses — all from a single unified system. Elegant, durable, and built to perform in the most demanding environments.

DISPLINE

Displine is Germany's precision-engineered solution for tablet wall mounting — transforming iPads and Android tablets into elegant, flush-mounted smart home control interfaces. Designed with architectural sensitivity, Displine mounts disappear into the wall, leaving only the screen visible — clean, minimal, and purposeful. Native KNX compatibility makes Displine the perfect pairing with MDT and IHome, turning any room into a beautifully controlled environment without compromising the interior design.

BLAUBERG

Blauberg is Germany's specialist in energy-efficient ventilation and indoor air quality systems — engineered for spaces where comfort and health are as important as aesthetics. Their heat recovery ventilation units operate silently and efficiently, maintaining fresh air circulation without energy waste. In a world where indoor air quality is increasingly critical, Blauberg brings precision engineering to every breath — integrating seamlessly with KNX for fully automated climate and ventilation control.

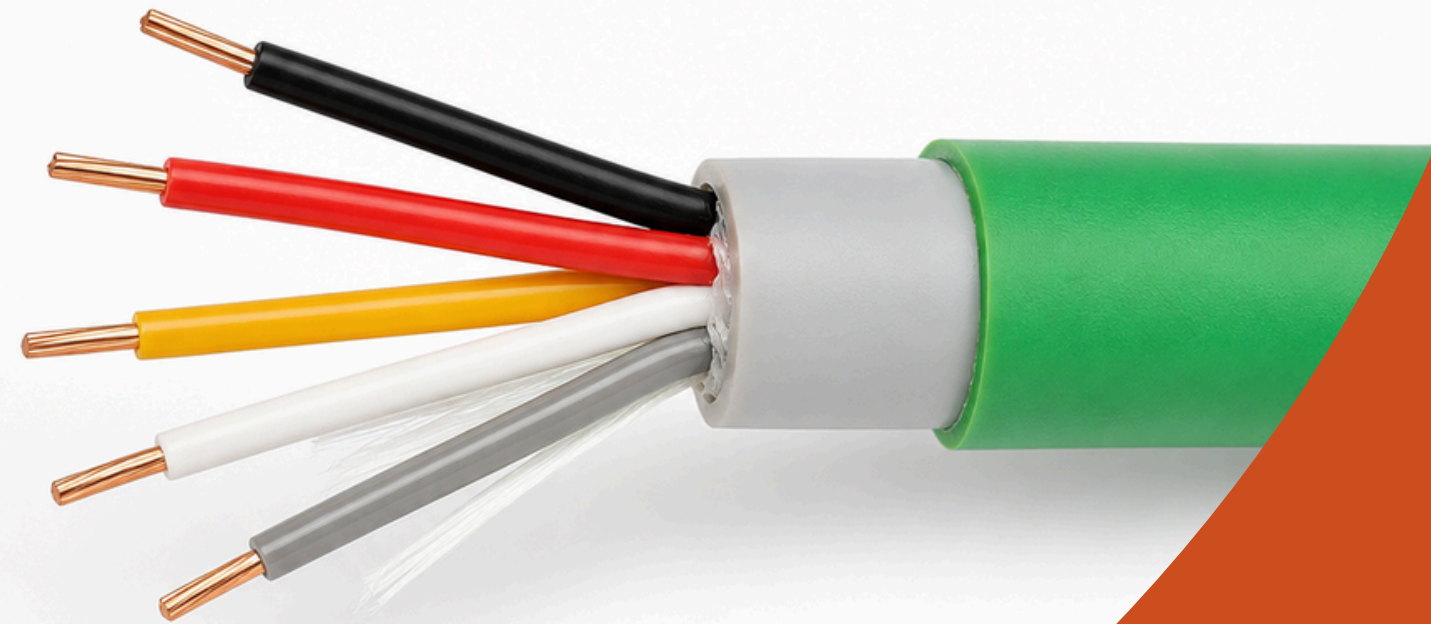

Earthquake Sounds

Earthquake Sounds is the USA's high-performance audio specialist — engineered for those who demand more from their sound experience. From powerful subwoofers to in-ceiling and in-wall speaker systems, Earthquake delivers impactful, room-filling audio that transforms any space into an immersive acoustic environment. Designed for luxury residential, home cinema, and premium commercial installations, Earthquake products are built to perform at the highest level — where sound is not background, but an experience in itself.

VOLTAN

Voltan delivers advanced electrical and control solutions engineered for reliability, performance, and seamless integration into intelligent building systems. Designed for the demands of premium residential and commercial environments, Voltan products form the critical electrical backbone that every smart space depends on. Precision-built and rigorously tested, Voltan ensures that the infrastructure behind your automation is as uncompromising as the technology it supports.

Conclusion

Morion Automation was built on a simple but uncompromising belief — that intelligent technology should be invisible, purposeful, and enduring. Over two decades of evolution have shaped not just our portfolio, but our approach: deliberate, precise, and always in service of the spaces and people we help create.

Through our curated roster of globally respected brands — MDT, TENSE, IHome, Trivum, Fasttel, Displine, Blauberg, Earthquake, and Voltan — we bring the full spectrum of intelligent building technology to India's most demanding environments. Every brand, every product, every partnership reflects the same standard we hold ourselves to.

We are not a catalogue. We are a partner.
